Homecare Solutions — Design Rationale

Project Overview

Homecare Solutions is a local cleaning service website redesign concept. The goal was to create a professional, user-friendly website that helps customers explore services, build trust, and request a quote easily.

Design Goals

- Present cleaning services clearly and make them easy to explore.
- Build trust through service benefits, testimonials, and FAQs.
- Encourage enquiries through prominent “Get a Quote” and “Contact Us” actions.
- Maintain a consistent experience across desktop and mobile layouts.

Design Decisions

Colour Palette: Navy blue, green, and white create a clean, professional appearance. Navy supports readability, green highlights important actions, and white keeps the layout uncluttered.

Layout and Navigation: Clear sections for services, benefits, the cleaning process, testimonials, and FAQs help users find information easily.

Typography and Visuals: Bold headings, readable text, service cards, icons, and cleaning-related images help users understand the services quickly.

Lead Generation: The “Get a Quote” button and quote-request form encourage enquiries. The Contact form provides another way for visitors to send a message, with confirmation screens providing feedback after submission.

Mobile Layout: The mobile homepage concept uses a narrower layout, a hamburger menu, and vertically arranged content to support smaller screens.

Conclusion

This redesign focuses on clarity, trust, and ease of use. It aims to help visitors understand the services, find relevant information, and take the next step toward requesting a quote.
